

Signup modal spec

This flow is used whenever a user wants to create an account, sign in, or reset their password. It should be

- Easy to use and familiar
- ExpII branded, and polished
- Have a “secure” feel

Some notes on the spec:

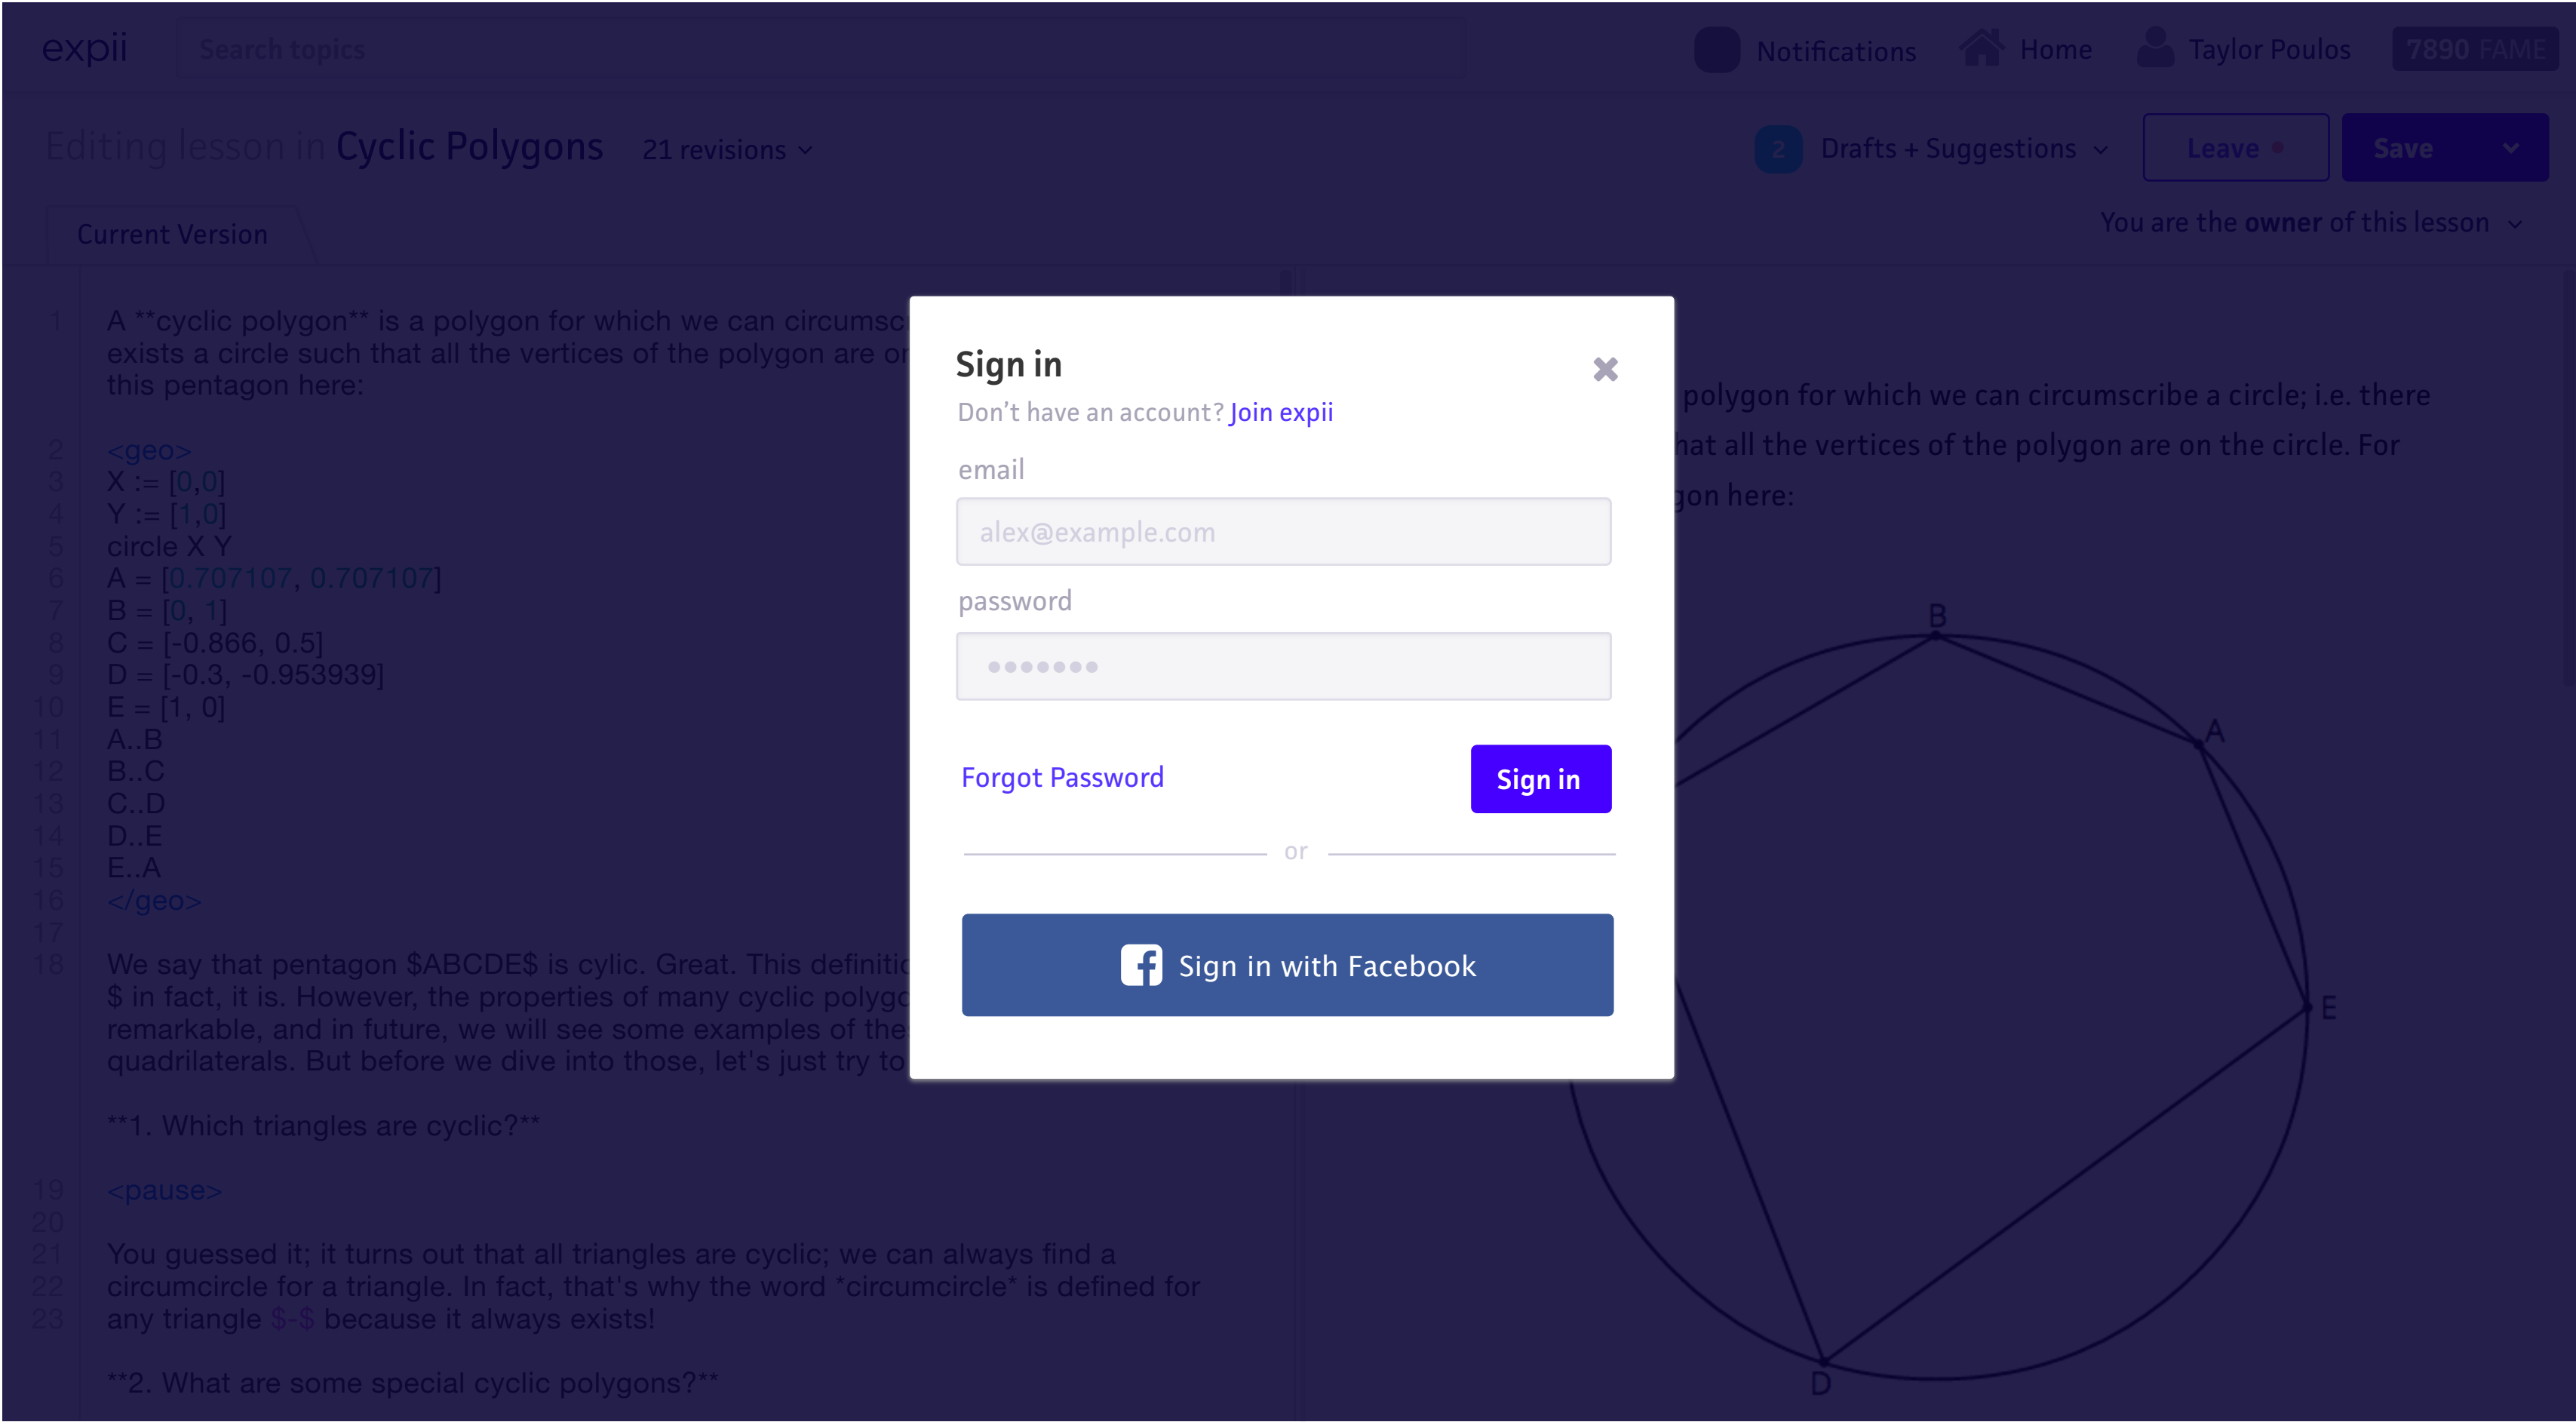

- Sometimes I use CSS to express colors and measurements. I don't guarantee that this is valid CSS, but I'm using this format because we're both familiar with it.

- Similarly, when I use the words margin or padding, I don't mean them in a strict CSS way: you should use whatever makes the most sense in your implementation.

- The class names I use in the spec are also not official, do whatever you think is best.

- I use REM units in this spec, which is (because of the way we've set up our css) an alias for 10px. Defer to our CSS style guide when choosing measurements, so long as they are equivalent to what's in this spec.

- I'm always looking for ways to improve these specs. Let me know if you have any thoughts or ideas while you're working, and I'll ask you for some suggestions when I'm checking out the finished product.

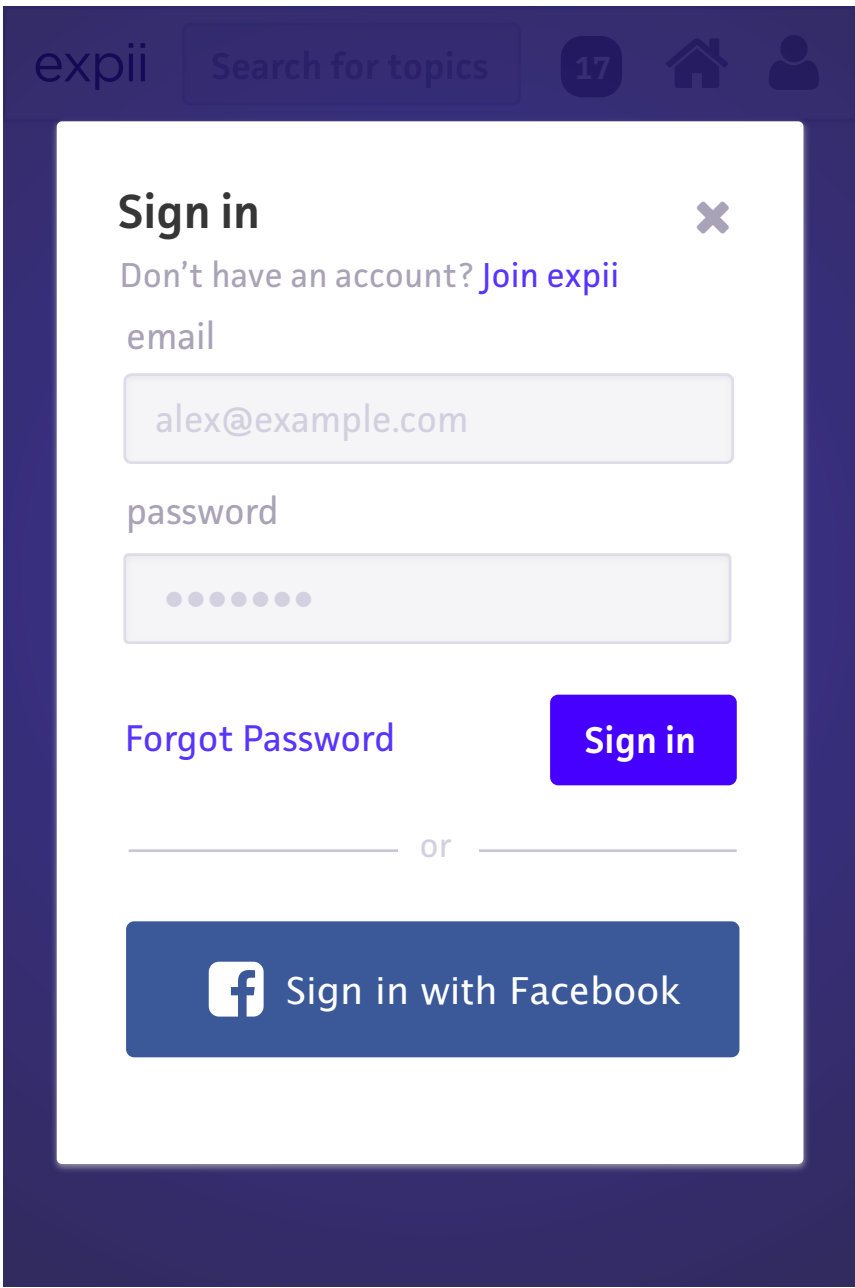

The modal opening effect should look something like this: (the fade in and scale)

http://tympanus.net/Development/ModalWindowEffects/

After talking about it, we decided that Taylor would not prototype the animation, but you would give him a chance to play with the values.

When switching modals (for example, the transition from “sign in” to “sign up”) the model should scale and fade in at the same time as the previous modal is fading out and scaling.

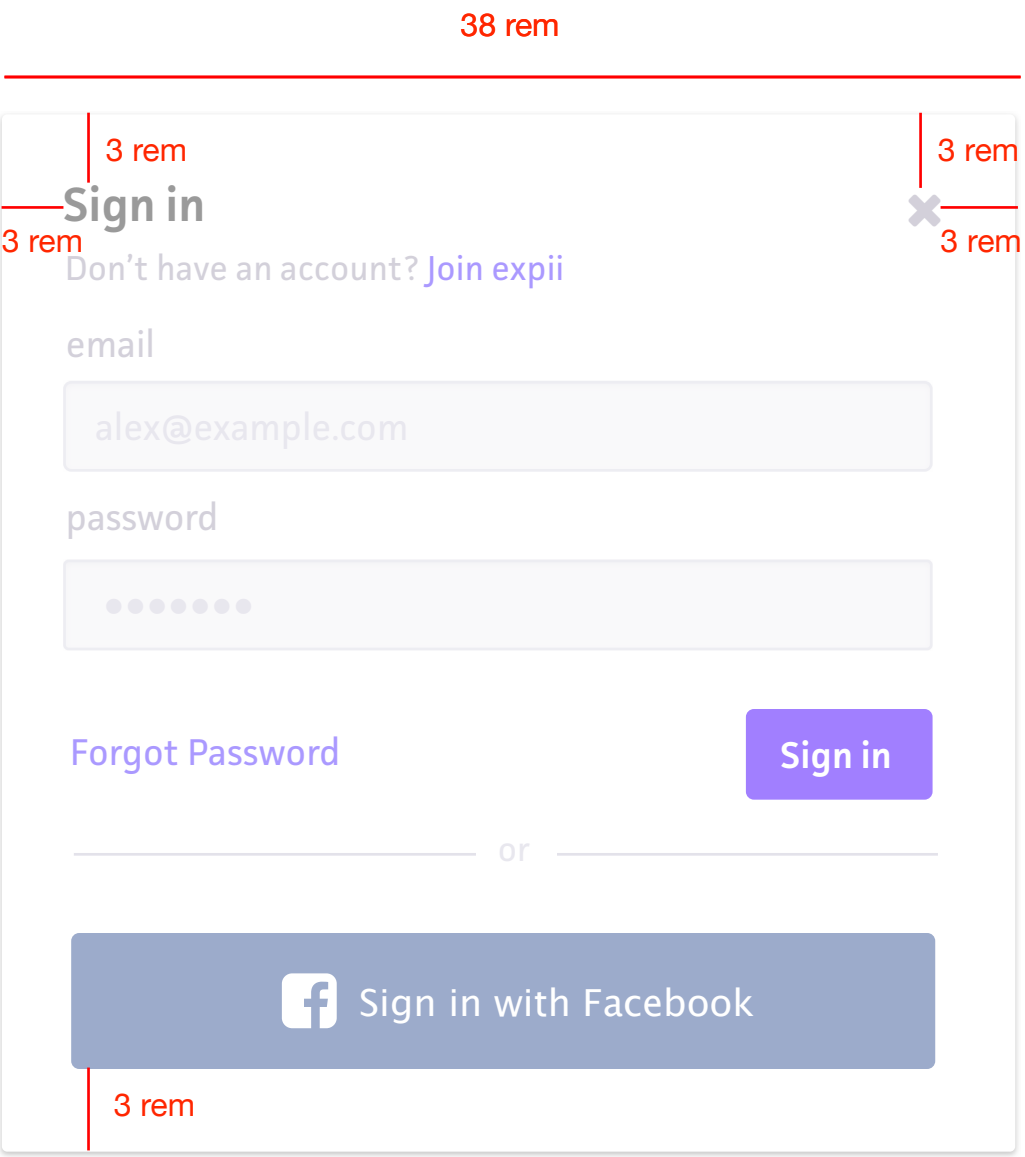

This modal should have 2rem of space to the right and left. It should be vertically centered within the container.

When the modal is larger than the screen, whole modal should scroll. The bottom of the modal, therefore, would be off the screen, and there should be no scroll bar inside of the modal.

When the modal is larger than the screen, there should be 2rem of space to the top and bottom, so that when it is scrolled all the way to the top, there is some padding between the modal's top and the screen's top.

Note that there is a subtle gradient on the background of this modal.

```
.modal-background {
  opacity: 0.85;
  background-image: radial-gradient(50% 115%, rgba(9,3,52,0.80) 45%, #0A0435 100%);
}
```

Expands to fit content

```
.modal-box {
  background-color: white;
  box-shadow: 0px 1px 3px $grey-dark;
}
```

\* Measurements inside the modal are covered in another mockup.

The various states of a client-side validated text input. This should be implemented as part of Felipe’s input box project.

Blank input (with placeholder)

alex@example.com

Focused input

alex@example.com

Focused input with some text

thebiggerlebo⌵

Focused input with valid text

thebiggerlebowski@gmail.com✔

Action buttons that require a response from the server should have a spinning loading indicator while the response is pending. This should be implemented as part of the expii solve input box.

```
.modal-title {
  font-family: Facit-Semibold;
  font-size: 1.8rem;
  color: $color-text;
  line-height: 1.8rem;
}

.instruction-text {
  font-family: Facit;
  font-size: 1.4rem;
  color: $gray-dark;
  line-height: 1.6rem;
}

.input-label {
  font-family: Facit;
  font-size: 1.4rem;
  color: $gray-dark;
  line-height: 1.6rem;
}

.alert-box {
  background-color: $color-good-lighter;
  color: $color-good;
  font-size: 1.4rem;
  line-height: 1.6rem;
  /* When the alert box is yellow, you should
  use $color-warn-lighter and
  $color-warn. */
}

.final-value{
  /* Note: this should have the same
  dimensions as the input box */
  background-color: $color-good;
  color: $color-good-lighter;
}

.or-container {
  color: $gray-dark;
  background-color: white;
  width: 30px;
  height: 15px;
  font-size: 14px;
  /* I could also give you the horizontal
  divider with or as an SVG file instead of
  making it out of CSS. Let me know if
  this would be easier */
}

.or-line {
  border-bottom: 1px solid $gray-dark;
}

input.warning {
  border: 1px solid $color-warn-light;
  background-color: $color-warn-lighter;
  /* Note, the inset box shadow from the
  textarea remains the same in this state */
}
```

## Forgot password

Success! You should get a password reset email within a few minutes. If you don't get one, try this form again.

email

On submitting the forgot password form, the email is uneditable. It's there so that people can tell if they entered the email wrong.

There is no warning if the email is not in our database, because apparently that's a security issue.

After the password/email combination fails, clear the password field, and select the text in the email field.

There is no success state for the sign in modal. Immediately take the user back to the screen they were looking at before.

When submitting a form with errors, the fields that had an error should be highlighted. The highlight should go away as soon as the content changes.

The user should also have the text of the error field selected.
